Meßgeräte / Meßmittel

DC-Voltmeter
Test-CD Sachn-Nr. 72008-376.00

Beachten Sie bitte das GRUNDIG Meßtechnik-Programm, das Sie unter folgender Adresse erhalten:

**GRUNDIG elektronics GmbH
Würzburger Str. 150, D-90766 Fürth/Bay.
Tel. 0911/703-0, Telefax 0911/703-4479**

Technische Daten

D/A-Wandler .... 1 Bit
Oversampling-Rate .... 8 fach
Frequenzbereich 20-20000Hz
Geräuschspannungsabstand 95dB
Gleichlaufschwankung .... unter Meßgrenze
Klirrfaktor (1kHz) 0,008%
Nenn-Ausgangspegel 0,68V
Nenn-Ausgangsimpedanz 1kΩ
Stromaufnahme 400mA
Betriebstemperatur .... -10˚C bis +50˚C
Gewicht ca. 2kg
Abmessungen (MCD 36) 25 x 6,4 x 16cm, (MCD 40) 25 x 8,1 x 16cm

General Section

Test Equipment / Aids

DC-Voltmeter
Test-CD Part No. 72008-376.00

Tel. 0911/703-0, Telefax 0911/703-4479**

Technical Data

D/A Converter 1Bit
Oversampling Rate .... 8 times
Frequency Range 20-20000Hz
Signal/Noise Ratio 95dB
Wow and Flutter .... immeasurably low
Distortion Factor (1kHz) 0.008%
Nominal Output Level 0.68V
Nominal Output Impedance 1kΩ
Current Consumption 400mA
Operating Temperature .... -10˚C bis +50˚C
Weigth approx. 2kg
Dimensions ... (MCD 36) 25 x 6.4 x 16cm, (MCD 40) 25 x 8.1 x 16cm

Ausbauhinweise

1. Ausbau des Gehäuses (MCD 36) Fig. 1

1a. Gehäuseoberteil abnehmen
- 9 Schrauben Ⓐ herausdrehen.
- 4 Rastnasen ①a ausrasten und Frontblende ① nach vorne abziehen.
- Gehäuseoberteil an der rechten Seite ausrasten, nach links hochklappen und abnehmen.

1b. Anschlußplatte ausbauen
- 2 Schrauben Ⓑ herausdrehen.
- Anschlußplatte Ⓒ abnehmen und Steckverbindung Ⓓ lösen.

1c. Gehäuseunterteil abnehmen
- 4 Klebestreifen ⑧ abziehen und 4 Dämpfer ⑦ nach außen herausziehen.
- Feder ⑤ und Feder ⑥ aushängen.
- Gehäuseunterteil abnehmen.

1d. Hebel ④ ausbauen
- 2 Schrauben Ⓔ herausdrehen.
- Die Hebel ④ bis zur Aussparung drehen und nach außen herausnehmen.

1. Ausbau des Gehäuses (MCD 40) Fig. 1a

1a. Gehäuseoberteil abnehmen
- 6 Schrauben Ⓐ herausdrehen.
- Frontblende ① ausrasten (8 Rastnasen ①a) und nach vorne abziehen.
- Gehäuseoberteil an der rechten Seite ausrasten, nach links hochklappen und abnehmen.

1b. Gehäuseunterteil abnehmen
- 2 Schrauben Ⓑ herausdrehen und Anschlußplatte Ⓒ abnehmen.
- 4 Klebestreifen ⑧ abziehen und 4 Dämpfer ⑦ nach außen herausziehen.
- 2 Federn ⑤ und 2 Federn ⑥ aushängen.
- Gehäuseunterteil abnehmen.
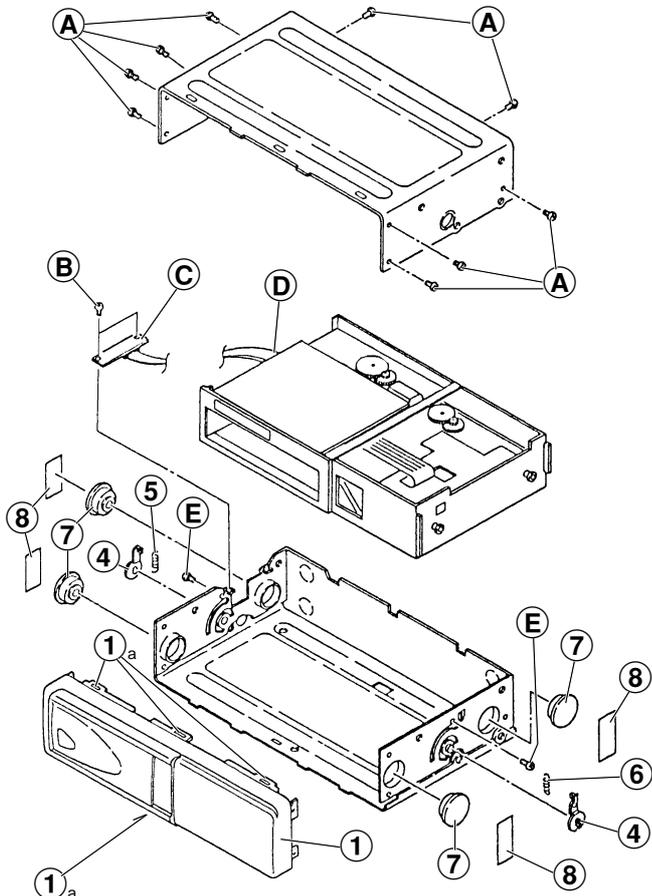

Disassembly Instructions

1. Disassembling the Cabinet (MCD 36) Fig. 1

1a. Removing the Upper Part of the Cabinet
- Undo 9 screws Ⓐ.
- Disengage 4 catches ①a and pull the front panel ① towards the front.
- Detach the top of the cabinet on the right side and raise it towards the left to remove it.

1b. Removing the Connection PCB
- Undo 2 screws Ⓑ.
- Remove the connection PCB Ⓒ and unplug the connector Ⓓ.

1c. Removing the Bottom Part of the Cabinet
- Remove the 4 pieces of adhesive tape ⑧ and pull out the 4 dampers ⑦.
- Unhook the spring ⑤ and the spring ⑥.
- Remove the bottom part of the cabinet.

1d. Removing the Levers ④
- Undo 2 screws Ⓔ.
- Turn the levers ④ to the cutout and withdraw them.

1. Disassembling the Cabinet (MCD 40) Fig. 1a

1a. Removing the Upper Part of the Cabinet
- Undo 6 screws Ⓐ.
- Disengage the front panel ① (8 catches ①a) and pull it towards the front.
- Detach the top of the cabinet on the right side and raise it towards the left to remove it.

1b. Removing the Bottom Part of the Cabinet
- Undo 2 screws Ⓑ and remove the connection PCB Ⓒ.
- Remove the 4 pieces of adhesive tape ⑧ and pull out the 4 dampers ⑦.
- Unhook the 2 springs ⑤ and the 2 springs ⑥.
- Remove the bottom part of the cabinet.

MCD 36
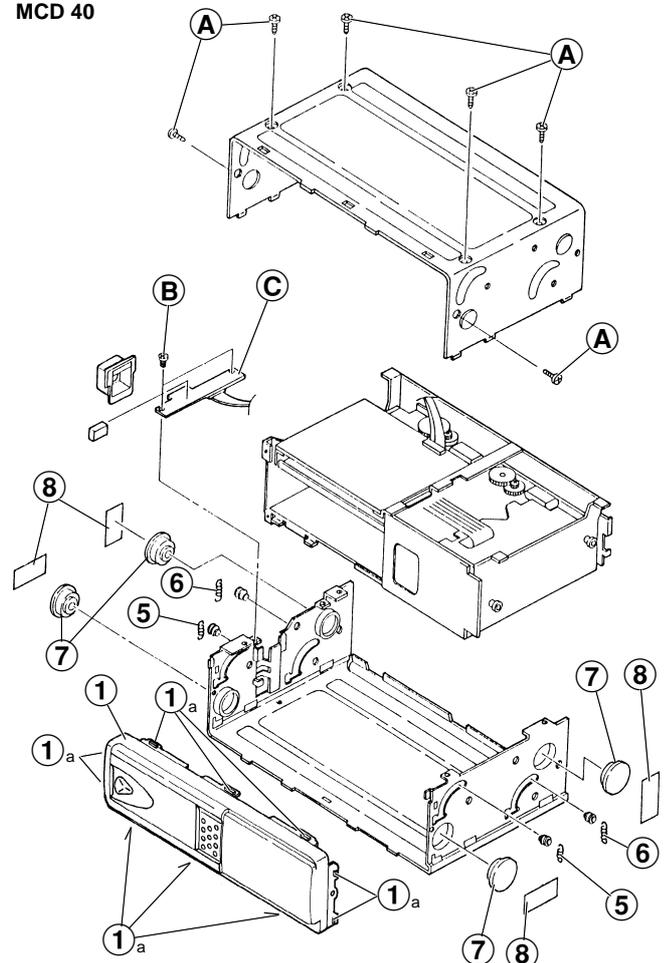

Fig. 1

MCD 40

Fig. 1a

Die folgenden Ausbauhinweise beziehen sich auf das Gerät MCD 40 (für MCD 36 mit geringfügigen Abweichungen).

2. Ausbau der Hauptplatte "Main PCB"
- Gehäuseoberteil abnehmen (Pkt. 1a).
- 4 Schrauben **C11** herausdrehen (Fig. 2).
- Steckverbindungen Ⓓ, Ⓕ, Ⓖ und Ⓗ lösen (Fig. 2 und 4).
- Leiterplatte entnehmen.

3. Ausbau der Zahnräder C2, C3 und C4
- Hauptplatte "Main PCB" ausbauen (Pkt. 2).
- Schrauben **C136** (2 Schrauben bei MCD 36, 4 Schrauben bei MCD 40, Fig. 3) herausdrehen.
- Blende **C134** abnehmen.
- 4 Schrauben **C10** herausdrehen und Magazinschachtoberteil **C1** herausnehmen (Fig. 2).
- Kunststoffscheiben **C5** und **C6** (Fig. 2) abziehen.
- Zahnräder **C2**, **C3** und **C4** abziehen.

4. Ausbau des Lift-Motors C7
- Gehäuseoberteil abnehmen (Pkt. 1a).
- 2 Schrauben **C8** herausdrehen (Fig. 2).
- Lift-Motor **C7** ablöten und herausnehmen. (Beim Einbau des Motors auf die richtige Polung achten!)

2. Removing the "Main PCB"
- Remove the upper part of the cabinet (para 1a).
- Undo the 4 screws **C11** (Fig. 2).
- Unplug the connectors Ⓓ, Ⓕ, Ⓖ and Ⓗ (Fig. 2 and 4).
- Take out the printed circuit board.

3. Removing the Gearwheels C2, C3 and C4
- Remove the "Main PCB" (para 2).
- Undo the screws **C136** (MCD 36: 2 screws, MCD 40: 4 screws, Fig. 3).
- Remove the mechanical panel **C134**.
- Undo 4 screws **C10** and remove the cover plate of the CD magazine compartment **C1** (Fig. 2).
- Loosen and remove the plastic washers **C5** and **C6** (Fig. 2).
- Pull off the gearwheels **C2**, **C3** and **C4**.

4. Removing the Lift Motor C7
- Remove the upper part of the cabinet (para 1a).
- Undo 2 screws **C8** (Fig. 2).
- Unsolder the lift motor **C7** and take it out. (Note the correct polarity when reassembling the motor!)

Fig. 2
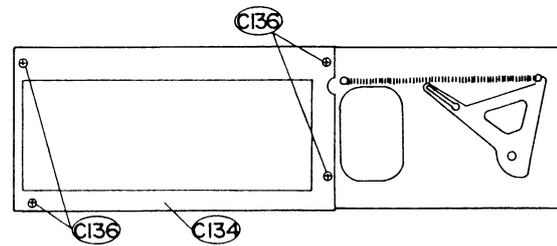

Fig. 3

Öffnen des Flexprint-Steckers
Opening the Flexprint Connector

Fig. 4

5. Ausbau des Loading-Motors C48
- Gehäuseoberteil abnehmen (Pkt. 1a).
- Schrauben **C136** (2 Schrauben bei MCD 36, 4 Schrauben bei MCD 40, Fig. 3) herausdrehen.
- Blende **C134** abnehmen.
- 4 Schrauben **C10** herausdrehen und Magazinschachtoberteil **C1** herausnehmen (Fig. 2).
- Kunststoffscheiben **C53** (Fig. 5) abziehen.
- Zahnräder **C51** und **C50** abziehen.
- 2 Schrauben **C49** herausdrehen (Fig. 5).
- Loading-Motor **C48** ablöten und herausnehmen. (Beim Einbau des Motors auf die richtige Polung achten!)

6. Ausbau des Optokopplers
- Gehäuseoberteil abnehmen (Pkt. 1a).
- 2 Schrauben Ⓘ herausdrehen (Fig. 5).
- Optokoppler Ⓙ ablöten und herausnehmen.

### 5. Removing the Loading Motor C48
- Remove the upper part of the cabinet (para 1a).
- Undo the screws **C136** (MCD 36: 2 screws, MCD 40: 4 screws, Fig. 3).
- Remove the mechanical panel **C134**.
- Undo 4 screws **C10** and remove the cover plate of the CD magazine compartment **C1** (Fig. 2).
- Loosen and remove the plastic washers **C53** (Fig. 5).
- Pull off the gearwheels **C51** and **C50**.
- Undo 2 screws **C49** (Fig. 5).
- Unsolder the loading motor **C48** and take it out. (Note the correct polarity when reassembling the motor!)

6. Removing the Optocoupler
- Remove the upper part of the cabinet (para 1a).
- Undo 2 screws Ⓘ (Fig. 5).
- Unsolder the optocoupler Ⓙ and take it out.

Fig. 5
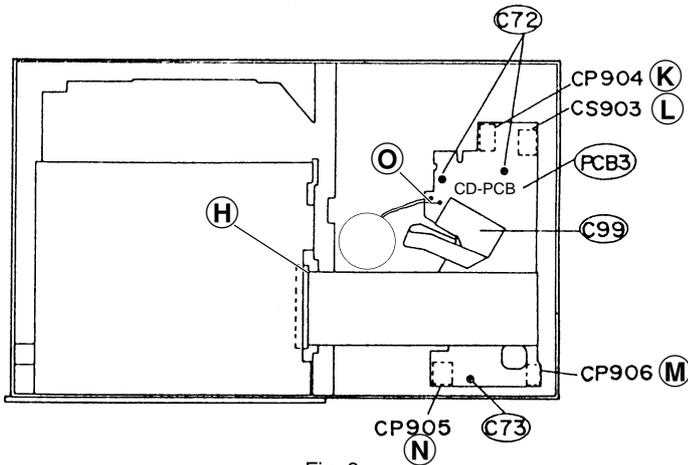

Fig. 6

Fig. 7

7. Ausbau der Leiterplatte "CD-PCB"
- Gehäuse ausbauen (Pkt. 1)
- 2 Schrauben **C72** und Schraube **C73** herausdrehen (Fig. 6).
- *Wichtig*: **Bevor die Steckverbindungen gelöst werden, müssen die beiden Lötstellen Ⓟ (Fig. 7) auf der Flexprintleitung C99 verbunden werden.**
- Steckverbindungen Ⓗ, Ⓚ, Ⓛ, Ⓜ und Ⓝ lösen (Fig. 4 und 6).
- Leitungen vom Disc-Motor ablöten Ⓞ.
- Leiterplatte "CD-PCB" herausnehmen.

8. Ausbau der Lasereinheit C87 (Fig. 7 und 8)
- Leiterplatte "CD-PCB" ausbauen (Pkt. 7).
- 4 Schrauben **C93** herausdrehen (Fig. 8).
- Die Spurstangen **C89** und **C90** zusammen mit der Lasereinheit **C87** vorsichtig herausnehmen.
- *Wichtig*: **Bevor die Steckverbindung Ⓠ der Flexprintleitung C99 gelöst wird, müssen die beiden Lötstellen Ⓡ (Fig. 7) auf der Lasereinheit C87 verbunden werden.**

9. Ausbau des Disc-Motors C76 (Fig. 2, 8 und 9)
- Lasereinheit ausbauen (Pkt. 8).
- 4 Schrauben **C10** herausdrehen und Magazinschachtoberteil **C1** herausnehmen (Fig. 2).
- Schraube **C79** herausdrehen und Schalter **C78** abnehmen (Fig. 8).
- Schraube **C95** herausdrehen.
- Halter **C92** und Haltefeder **C94** abnehmen.
- Spindel **C88** herausnehmen.
- Schraube **C75** herausdrehen.
- Kunststoffscheibe **C86** abziehen.
- Motorhalter **C74** mit Disc-Motor **C76** (Fig. 9) vorsichtig herausnehmen.
- 2 Schrauben **C77** (Fig. 9) herausdrehen, Motor **C76** ablöten und herausnehmen. (Beim Einbau des Motors auf die richtige Polung achten!)
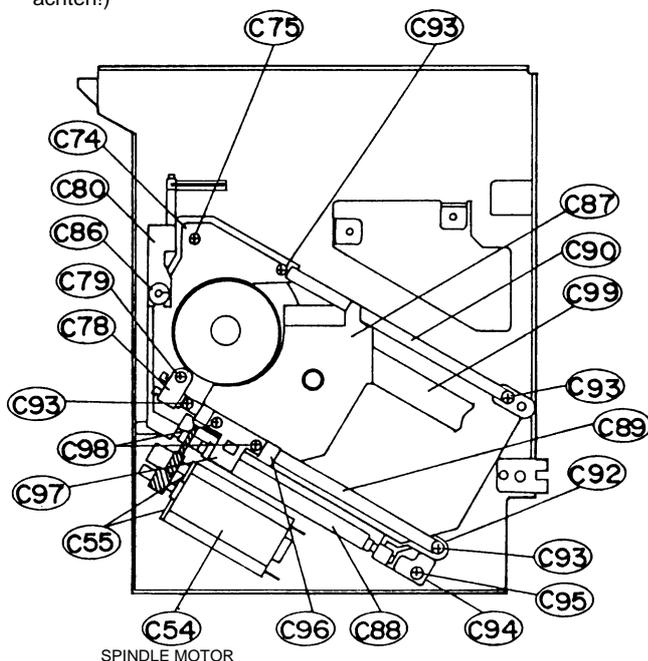

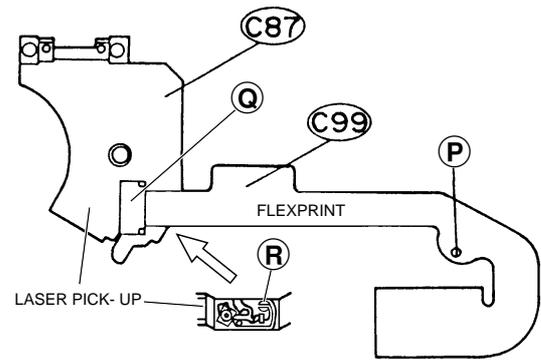

7. Removing the "CD-PCB"
- Remove the cabinet (para 1)
- Undo 2 screws **C72** and the screw **C73** (Fig. 6).
- *Important*: **Before opening the connectors connect the two solder tags Ⓟ on the flexprint C99 as shown in Fig. 7.**
- Disconnect the connectors Ⓗ, Ⓚ, Ⓛ, Ⓜ and Ⓝ (Fig. 4 and 6).
- Unsolder the leads from the disc motor Ⓞ.
- Take out the "CD-PCB".

8. Removing the Laser Pick-up C87 (Fig. 7 and 8)
- Take out the "CD-PCB" (para 7).
- Undo 4 screws **C93** (Fig. 8).
- Take out the guides **C89** and **C90** together with the laser pick-up **C87** carefully.
- *Important*: **Before opening the connector Ⓠ of the flexprint C99 connect the two solder tags Ⓡ on the laser pick-up C87 as shown in Fig. 7.**

9. Removing the Disc Motor C76 (Fig. 2, 8 and 9)
- Remove the laser pick-up (para 8).
- Undo 4 screws **C10** and remove the cover plate of the CD magazine compartment **C1** (Fig. 2).
- Undo the screw **C79** and take off the switch **C78** (Fig. 8).
- Undo the screw **C95**.
- Take out the holder **C92** and supporting spring **C94**.
- Remove the spindle **C88**.
- Undo the screw **C75**.
- Loosen and remove the plastic washer **C86**.
- Remove the motor holder **C74** with the disc motor **C76** (Fig. 9) carefully.
- Undo 2 screws **C77** (Fig. 9), unsolder the motor **C76** and take it out. (When re-soldering the motor note the correct polarity!).

Fig. 8
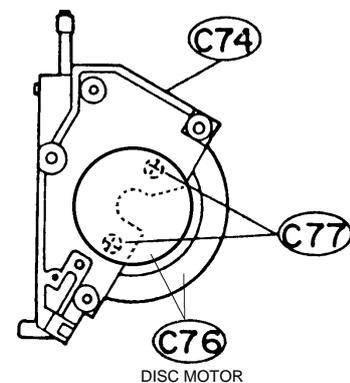

Fig. 9

10. Ausbau der Laufwerkmechanik (MCD 40)
  - Gehäuse ausbauen (Pkt. 1).
  - 4 Schrauben **C136** herausdrehen und Blende **C134** abnehmen (Fig. 10).
  - 4 Schrauben **C10** herausdrehen und Magazinschachtoberteil **C1** mit der Leiterplatte (Main PCB) herausnehmen (Fig. 2).
  - Die Laufwerkmechanik durch Bewegen des Schiebers **C15** "Slide Lever" in Pfeilrichtung (Fig. 5) nach oben fahren.
  - 2 Federn **C19** und Feder **C137** aushängen (Fig. 10).
  - 3 Sicherungsscheiben **C21** lösen und abnehmen (Fig. 10).
  - 3 Winkel **C18** abnehmen. (Fig. 10)
  - 3 Schrauben **C46** herausdrehen und vordere Halteplatte **C41** abnehmen (Fig. 10).
  - Laufwerkmechanik **C47** (Fig. 10) mit den Zahnstangen herausnehmen. Achten Sie dabei auf die 3 Hülsen **C20** (Fig. 10).
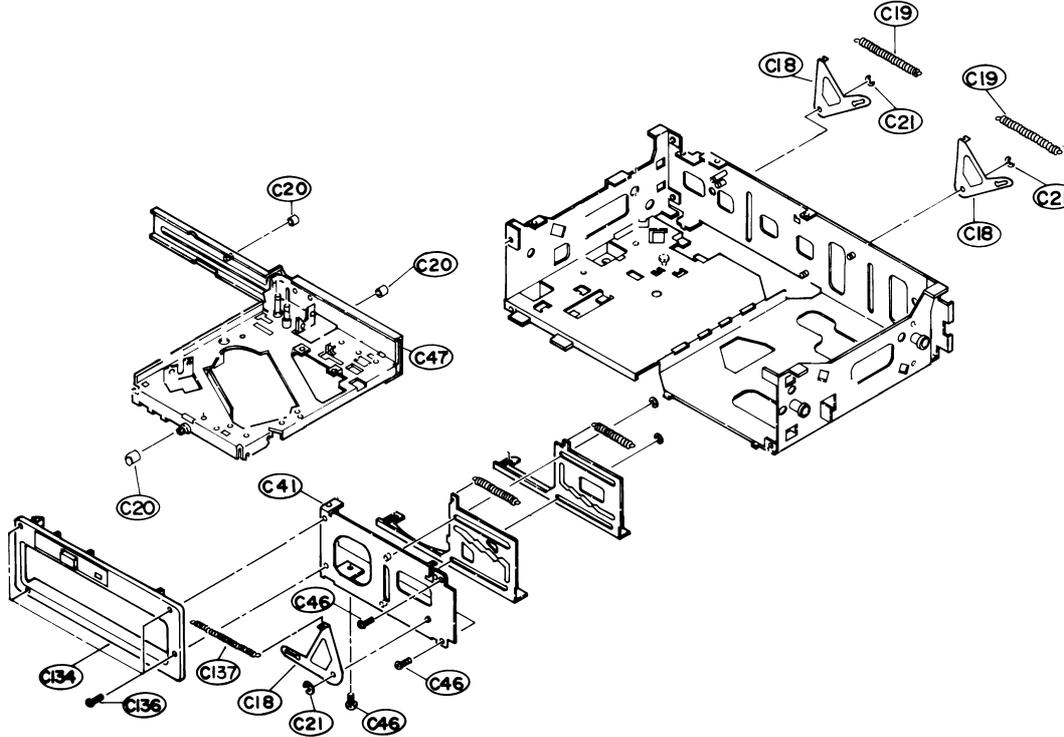

10. Removing the Drive Mechanism (MCD 40)
  - Remove the cabinet (para 1).
  - Undo 4 screws **C136** and remove the mechanical panel **C134** (Fig. 10).
  - Undo 4 screws **C10** and remove the cover plate of the CD magazine compartment **C1** with the main PCB (Fig. 2).
  - Raise the drive mechanism by moving the "Slide Lever" **C15** in the direction of the arrow (Fig. 5).
  - Unhook 2 springs **C19** and spring **C137** (Fig. 10).
  - Loosen and remove the 3 retaining washers **C21** (Fig. 10).
  - Remove the 3 brackets **C18** (Fig. 10).
  - Undo 3 screws **C46** and remove the front holding plate **C41** (Fig. 10).
  - Take out the drive mechanism **C47** (Fig. 10) and the toothed racks. Take care of the 3 sleeves **C20** (Fig. 10).

Fig. 10

11. Manuelles Ausfahren der CD aus dem Laufwerk
  - Das Zahnrad **C51** (Fig. 11) im Uhrzeigersinn bis zum Anschlag drehen (der Disc-Einschub wird in das Magazin geschoben).

12. Magazin mit dem Hebel "Lock Lever" auswerfen
  - Nur wenn sich alle CD´s im Magazin befinden, läßt es sich mit dem Hebel "Lock Lever" auswerfen.
  - Hebel (Geräteunterseite) in Pfeilrichtung betätigen (Fig. 12).

13. Magazin mit dem Schieber "Slide Lever" auswerfen
  - Nur wenn sich alle CD´s im Magazin befinden, läßt es sich mit dem Schieber "Slide Lever" auswerfen.
  - Zahnrad **C3** (Fig. 11) solange gegen den Uhrzeigersinn drehen bis sich der Schieber am Anschlag (Pfeilrichtung) befindet und das Magazin ausgeworfen wird.
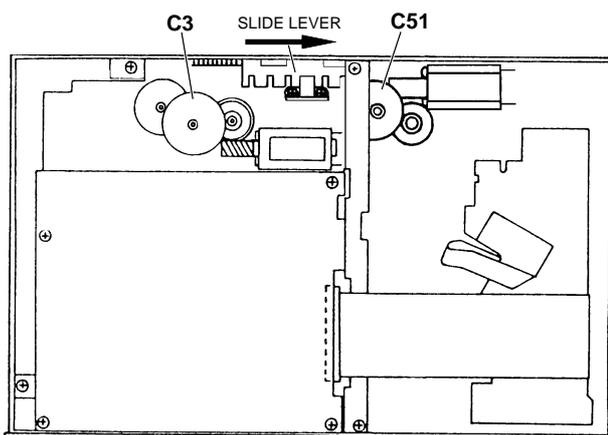

11. Manual Ejection of the CD from the Drive Mechanism
  - Turn the gearwheel **C51** (Fig. 11) clockwise to the limit stop (disc shelf is moved into the magazine).

12. Ejecting the Magazine with the "Lock Lever"
  - Ejection with the "Lock Lever" is only possible when all CD's are in the magazine.
  - Move the "Lock Lever" (bottom side) in the direction of the arrow (Fig. 12).

13. Ejecting the Magazine with the "Slide Lever"
  - Ejection with the "Slide Lever" is only possible when all CD's are in the magazine.
  - Turn the gearwheel **C3** (Fig. 11) anticlockwise until the "Slide Lever" arrives at the limit stop (arrow) thus ejecting the magazine.

Fig. 11
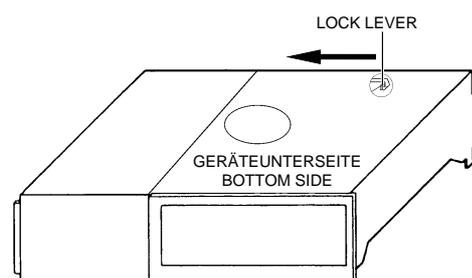

Fig. 12

Steuerungsablauf (Mechanik)
Flowchart of Control Operation (Mechanics)
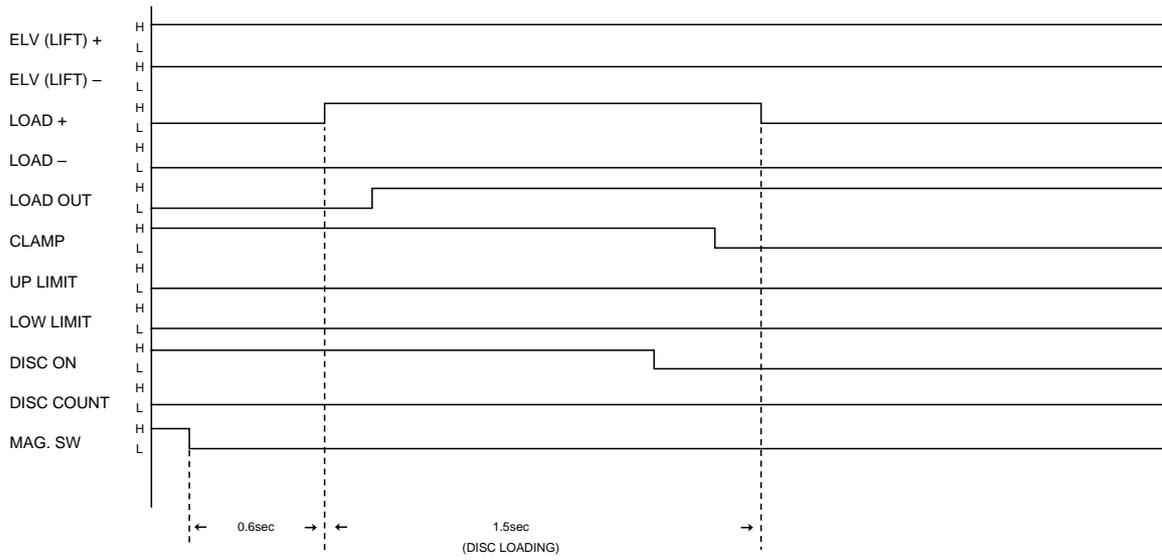

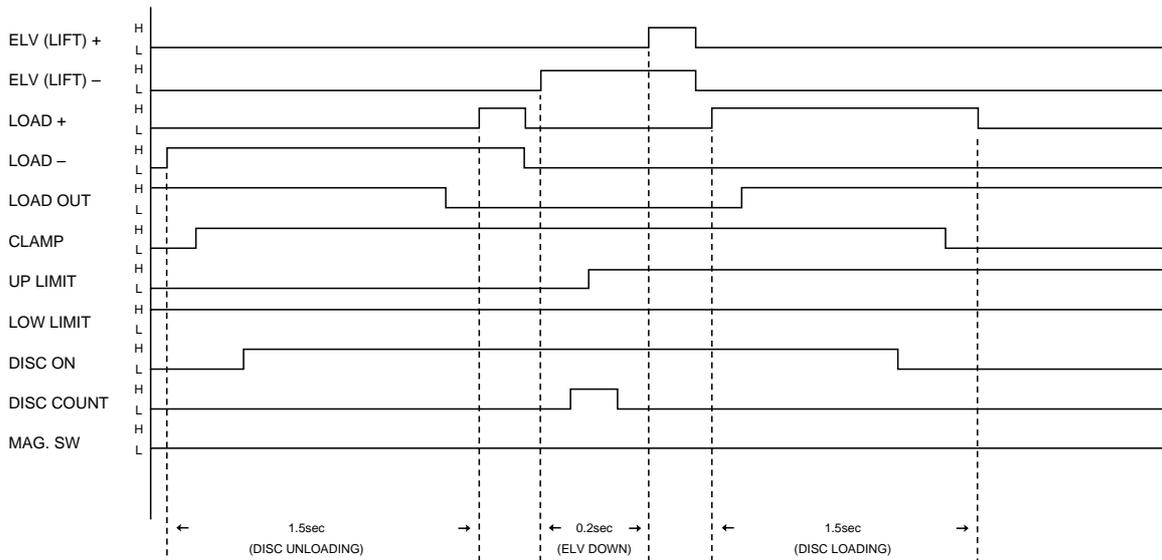

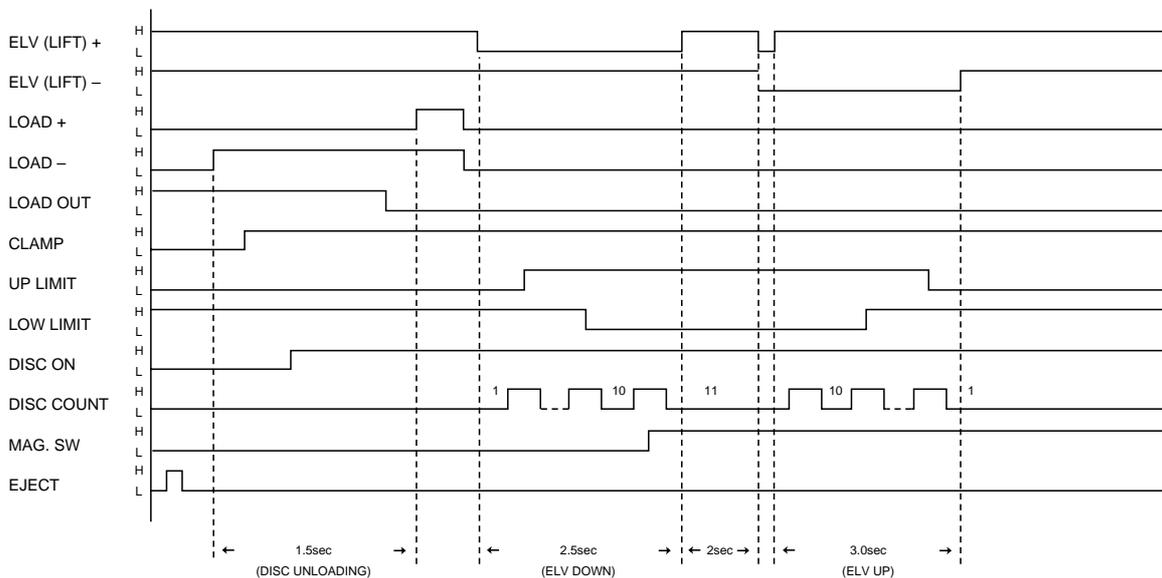

(D)

Abgleich

Meßgeräte:
Autosuper, DC-Voltmeter, Test-CD (Sach-Nr. 72008-376.00).

Abgleich	Vorbereitung	Abgleichvorgang
Tracking offset	**DC-Voltmeter** an die Meßpunkte "**VR**" und "**TE**" anschließen (– = VR, + = TE). Test-CD einlegen. Funktion: PLAY	**+10mV** $\pm$ **3mV** mit dem Regler **SVR651** einstellen.

(GB)

Adjustment

Test equipment:
Car Radio, DC-Voltmeter, test CD (Part No. 72008-376.00)

Adjustment	Preparation	Adjustment Procedure
Tracking offset	Connect the **DC-Voltmeter** to the test points "**VR**" and "**TE**" (– = VR, + = TE). Load the test CD. Function: Play	Adjust **+10mV** $\pm$ **3mV** with the adjustment control **"SVR651"**.

IC601 LC78620E
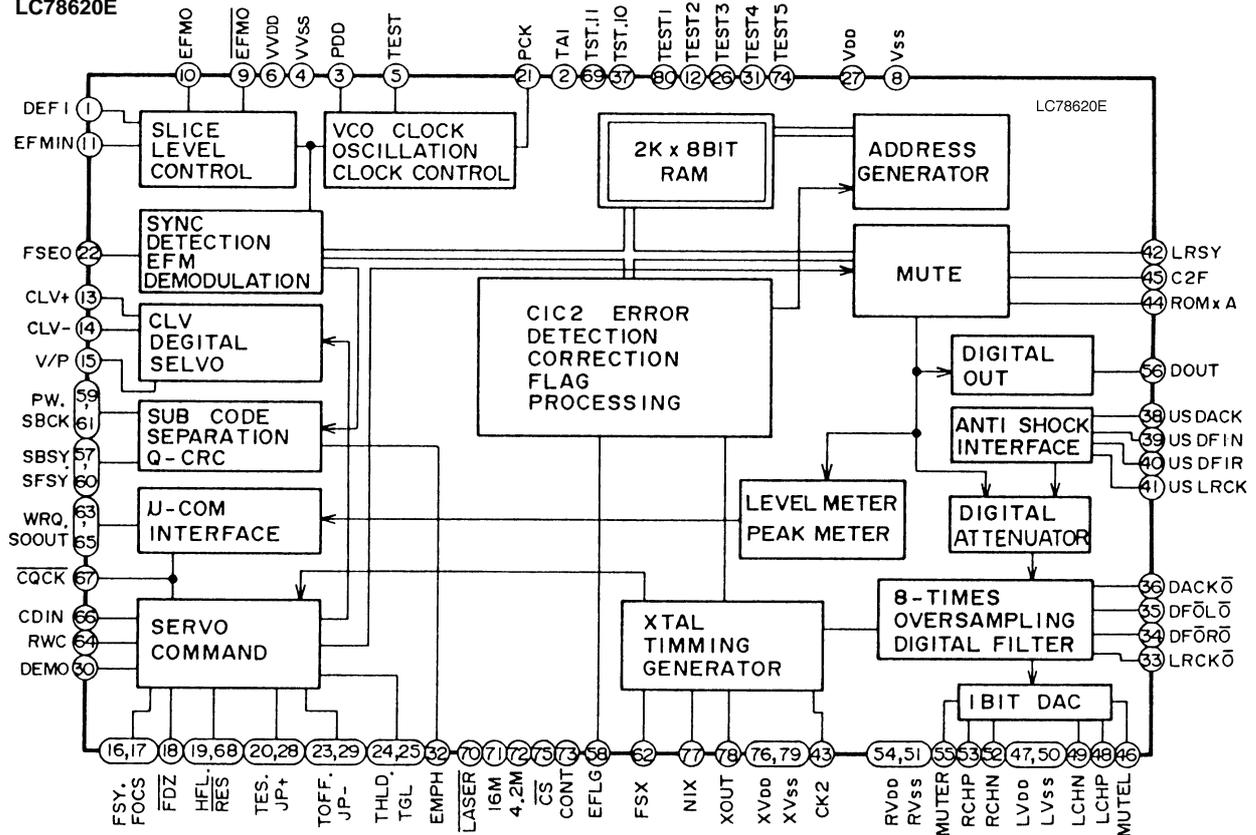

CIRCUIT OPERATION DESCRIPTION
LC78620E

| Terminal Number	Terminal Code	I/O	Function Explanation		
1	DEFI	I	Defect detection signal (DEF) input terminal. (When unused, "L".)		
2	TAI	I	For PLL	Input terminal for testing. Pulldown resistance is self-contained.	
3	PDO	O		Phase comparison output terminal for outer VCO control.	
4	VVss			Power supply terminal for self-contained VCO. Normally 0V.	
5	ISET	AI		Resistance connecting terminal for PDO output current adjustment.	
6	VVDD			Earthing terminal for self-contained VCO. Normally 5V.	
7	FR	AI		For VCO range frequency adjustment.	
8	Vss		Earthing terminal for digital system. Normally 0V.		
9	EFMO	O	For slice level control	EFM signal reverse output terminal.	
10	EFMO	O		EFM signal output terminal.	
11	EFMIN	I		EFM signal input terminal.	
12	TEST2	I	Input terminal for testing. Pulldown resistance is self-contained.		
13	CLV+	O	Output terminal for spindle servo control. Accelerates when CLV+ is "H", slows down when CLV- "H".		
14	CLV-	O			
15	V/P	O	Output terminal for automatic switchover monitor by rough servo / phase control. "H" causes rough servo, "L" phase control mode.		
16	FOCS	O	Output terminal for focus servo on/off. "L" causes focus servo ON.		
17	FST	O	Output terminal for focus start pulse. Open drain output.		
18	FZD	I	Input terminal for focus error zero cross signal. (When unused, "L".)		
19	HFL	I	Input terminal for track detecting signal. Schmidt input.		
20	TES	I	Input terminal for tracking error signal. Schmidt input.		
21	PCK	O	Clock monitoring terminal for EFM data playback. At the time of phase lock, 4.3218MHz.		
22	FSEQ	O	Output terminal for synchronous signal detection. When synchronous signal detected from EFM signal and synchronous signal occurring inside correspond, "H".		
23	TOFF	O	Output terminal for tracking OFF.		
24	TGL	O	Output terminal for tracking gain switchover. "L" raises gain.		
25	THLD	O	Output terminal for tracking hold.		
26	TESTS	O	Output terminal for testing. Pulldown resistance is self-contained.		
27	VDD		Power supply terminal for digital system. Normally 5V.		
28	JP+	O	Output terminal for track jump. When JP+ is "H", accelerates at the time of outer track direction jump, or slows down at the time of inner track direction jump. When JP- is "H", accelerates at the time of inner track direction jump, or slows down at the time of outer track direction. 3 value output is possible by command.		
29	JP-	O			
30	DEMO	I	Input terminal for sound turn-on function at the time of set adjustment process. Pulldown resistance is self-contained.		
31	TEST4	I	Input terminal for testing. Pulldown resistance is self-contained.		
32	EMPH	O	Output terminal for deemphasis monitor. At the time of "H", deemphasis disc is in playback.		
33	LRCKO	O	Digital filter output.	Word clock output.	
34	DFORO	O		RCH data output.	
35	DFOLO	O		LCH data output.	
36	DACKO	O		Bit clock output.	
37	TESTIO	O	Output terminal for testing. Open (Normally "L" output).		
38	USDACK	I	Anti-shock correspondence input. (unused, "L".)	Bit clock input.	
39	USDFIN	I		LRch data.	

40	USDFIR	I	Anti-shock correspondence input. (unused, "L".)	Input terminal for testing. Normally "L".	
41	USLRCK	I		Word clock output. (When unused, "L".)	
42	LRSY	O	ROMXA correspondence input	L/R clock output.	
43	CK2	O		Bit clock output.	DACLK (At the time of RES)
				Polarity reverse (CK2CON mode)	
44	ROMAX	O		Data output.	Data (Supplement) (At the time of RES) ROMOUT (ROMXA mode)
45	C2F	O		C2 Frag output.	
46	MUTEL	O	For 1bit DAC	Mute output terminal.	
47	LVDD			Power supply terminal for L channel. Normally 5V.	
48	LCHP	O		L channel P output terminal.	
49	LCHN	O		L channel N output terminal.	
50	LVss			Earthing terminal for L channel. Normally 0V.	
51	RVss			Earthing terminal for R channel. Normally 0V.	
52	RCHN	O		R channel N output terminal.	
53	RCHP	O		R channel P output terminal.	
54	RVDD			Earthing terminal for R channel. Normally 5V.	
55	MUTER	O		Mute output terminal.	
56	DOUT	O	Digital OUT output terminal.		
57	SBSY	O	Output terminal for synchronous signal of sub-code block.		
58	EFLG	O	Terminal for monitoring C1, C2, single, double correction.		
59	PW	O	Output terminal for sub-code P, Q, R, S, T, U, W.		
60	SFSY	O	Output terminal for synchronous signal of sub-code frame. When sub-code is in standby, " = L ".		
61	SBCK	I	Input terminal for sub-code readout clock. Schmidt input.		
62	FSX	O	Output terminal for 7.35KHz synchronous signal which is divided frequency from crystal oscillation.		
63	WRQ	O	Output terminal for sub-code Q output standby.		
64	RWC	I	Input terminal for read/write control.		
65	SQOUT	O	Sub-code Q output terminal.		
66	COIN	I	Input terminal for command from micro computer.		
67	CQCK	I	Input terminal for command input intake clock, or sub- code offtake clock from SQOUT. Schmidt input.		
68	RES	I	Chip reset input terminal. When power is supplied, changeover to "L" once.		
69	TST11	O	Input terminal for testing. Open (normally "L" output).		
70	LASER	O	Output terminal for laser ON/OFF. Controls by serial data command from micro computer.		
71	16M	O	16.9344MHz output terminal. But outputs 33.8688MHz, only in case of quadruple speed playback mode.		
72	4.2M	O	4.2336MHz output terminal.		
73	CONT	O	Spare output terminal. Controls by serial data command from micro computer.		
74	TEST5	I	Input terminal for testing. Pulldown resistance is self-contained.		
75	CS	I	Chip select input terminal. Pulldown resistance is self-contained.		
76	XVss		Earthing terminal for crystal oscillation. Normally 0V.		
77	XIN	I	Connecting terminal for 16.9344MHz crystal oscillator.		
78	XOT	O	Connects 33.8688MHz crystal oscillator, in case of quadruple speed playback system.		
79	XVDD		Power supply terminal for crystal oscillation. Normally 5V.		
80	TEST1	I	Input terminal for testing. Pulldown resistance is self- contained.		

IC650   LA9230MS
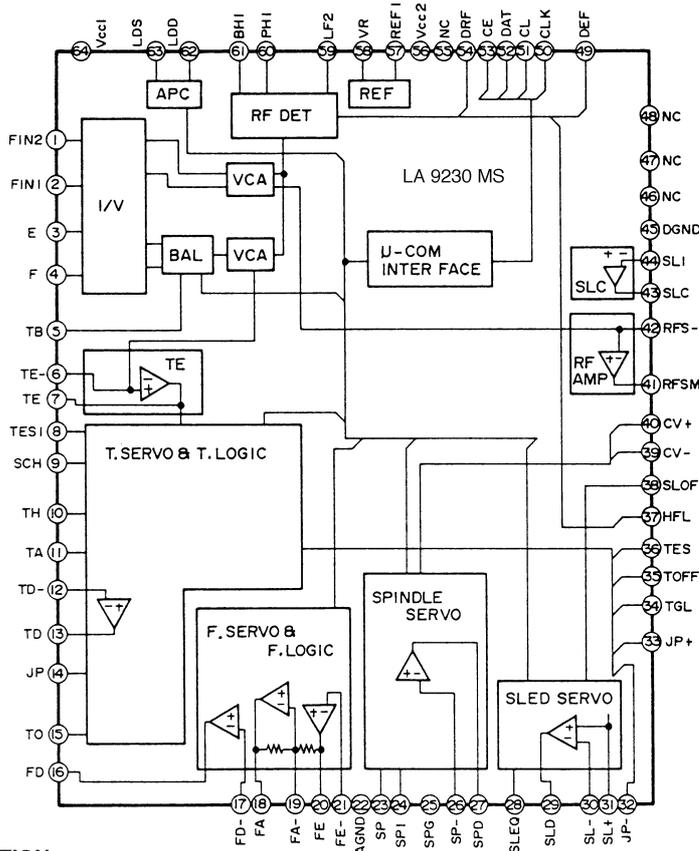

CIRCUIT OPERATION DESCRIPTION
LA9230MS

PIN No.	PART NAME	EXPLANATION
1	FIN2	Pickup photo-diode connecting pin. Forms RF signal by addition to FIN1 pin, and FE signal by subtraction.
2	FIN1	Pickup photo-diode connecting pin.
3	E	Pickup photo-diode connecting pin. Forms TE signal by subtraction from F pin.
4	F	Pickup photo-diode connecting pin.
5	TB	Pin for inputting DC constituent of TE signal.
6	TE-	Pin for connecting gain setting resistence of TE signal to TE pin.
7	TE	TE signal output pin.
8	TESI	TES (TRACK ERROR SENCE) comparator input pin. Band Pass TE signal, and input.
9	SCI	Input pin for shock detection.
10	TH	Constant setting pin at the time of tracking gain.
11	TA	Pin for connecting high pass elimination condensor of servo.
12	TD-	Pin for constituting tracking phase compensation constant between TD and VR pin.
13	TD	Pin for setting tracking phase compensation.
14	JP	Pin for setting tracking jump signal (kick pulse) amplitude.
15	TO	Tracking control signal output pin.
16	FD	Focusing control signal output pin.
17	FD-	Pin for constituting focussing phase compensation constant between FD and FA pin.
18	FA	Pin for constituting focussing phase compensation constant between FA- and FE- pin.
19	FA-	Pin for constituting focussing phase compensation constant between FA and FE pin.
20	FE	FE signal output pin.
21	FE-	Pin for connecting FE signal gain setting resistance to TE pin.
22	AGND	GND for analog signal.
23	SP	Single end output of CV+ and CV- pin input signal.
24	SPI	Spindle amplifier input.
25	SPG	Connecting pin for gain setting resistance at the time of spindle 12cm mode.
26	SP-	Connecting pin for Spindle phase compensation constant together with SPD pin.
27	SPD	Spindle control signal output pin.
28	SLEQ	Connecting pin for sled phase compensation constant.
29	SLD	Sled control signal output pin.
30	SL-	Input pin for sled delivery signal from micro computer.
31	SL+	Input pin for sled delivery signal from micro computer.
32	JP-	Input pin for tracking jump signal from DSP.
33	JO+	Input pin for tracking jump signal from DSP.
34	TGL	Input pin for tracking gain control signal from DSP. Gain low in case of TGL="H".
35	TOFF	Input pin for tracking off control signal from DSP. Off in case of TOFF="H".
36	TES	Output pin of TES signal to DSP.
37	HFL	(HIGH FREQENCY LEVEL) is used to judge whether main beam is located above pit or above mirror.
38	SLOF	Sled servo off control input pin.
39	CV-	Input pin for CLV error signal from DSP.
40	CV+	Input pin for CLV error signal from DSP.
41	RFSM	RF output pin.
42	RFS-	Pin for setting RF gain and EFM signal 3T compensation constant together with RFSM pin.
43	SLC	(SLICE LEVEL CONTROL) is output pin for controlling data slice level by RF waveshape DSP.
44	SLI	Input pin for controlling data slice level by DSP.
45	DGND	GND pin of digital system.
46	NC	NO CONNECT.
47	NC	NO CONNECT.
48	NC	NO CONNECT.
49	DEF	Output pin for detecting disc defect.
50	CLK	Standard clock input pin. DSP4.23MHz is input.
51	CL	Micro computer command clock input pin.
52	DAT	Micro computer command data input pin.
53	CE	Micro computer command chip enable input pin.
54	DRF	(DEFECT RF) RF level detecting output.
55	NC	NO CONNECT.
56	VCC2	VCC pin for servo system and digital system.
57	REF1	Connection pin for standard voltage capacitor.
58	VR	Standard voltage output pin.
59	LF2	Pin for setting constant at the time of detecting disc defect.
60	PH1	Pin for connecting condensor for RF signal peak hold.
61	BH1	Pin for connecting condensor for RF signal bottom hold.
62	LDD	APC circuit output pin.
63	LDS	APC circuit input pin.
64	VCC1	RF system VCC pin.

IC801 LC66358B
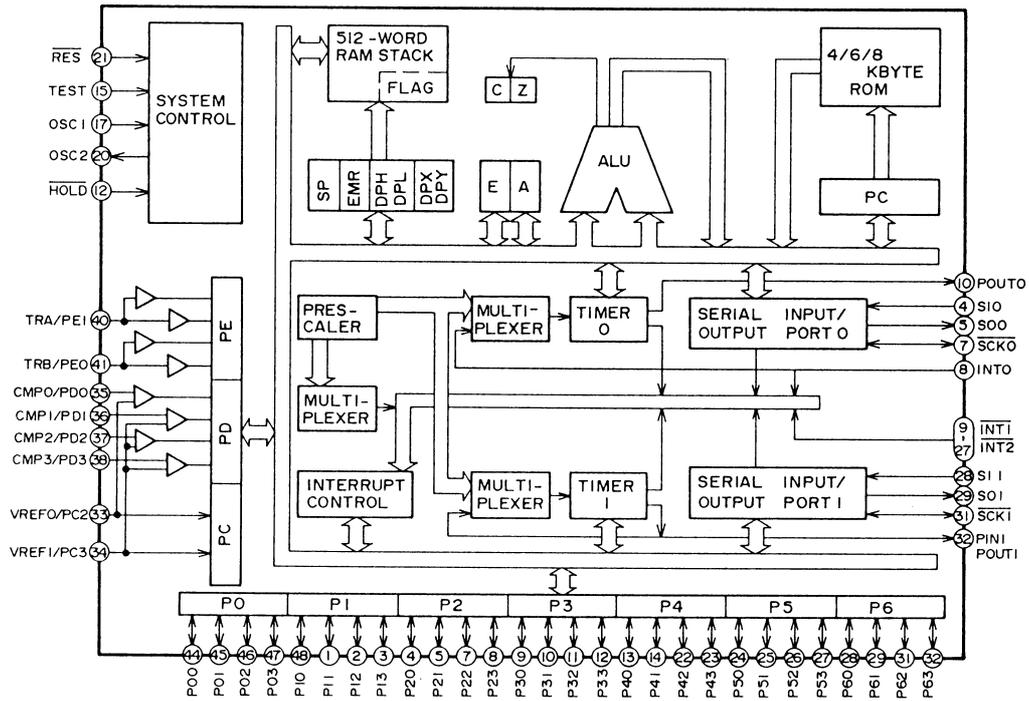

CIRCUIT OPERATION DESCRIPTION
LC66358B

PIN NO.	PORT NAME	I/O	DESCRIPTION
1	FEM+	O	Pickup moving outside output terminal
2	LO+	O	Output to move a trey in the ditection out of magazine with loading motor.
3	LO-	O	Output to move a trey in the ditection out of magazine with loading motor.
4	SQOUT	I	Interface with spc (LC78620E).
5	COIN	O	Interface with spc (LC78620E).
6	N.C	–	No connection
7	CQCK	O	Interface with spc (LC78620E).
8	WRQ	I	Interface with spc (LC78620E).
9	DATA I	I	Command data input.
10	RWC	O	Interface with spc (LC78620E).
11	CD+B	O	CD mode signal output terminal.
12	STBY	I	Stand by position cancellation input terminal.
13	POWER	O	Main & Servo system power supply on/off terminal.
14	DATA O	O	Status data output.
15	TEST	–	Connect to GND
16	VSS	–	Ground
17	OSC1		Cermic oscillator connection terminal for system clock.
18	N.C	–	No connection
19	N.C	–	No connection
20	OSC2		Cermic oscillator connection terminal for system clock.
21	/RESET	I	Reset signal input terminal.
22	ELV-	O	Elevator moving - down output signal.
23	ELV+	O	Elevator moving - up output signal.
24	DSRST	O	Reset signal to spc (LC78620E) output terminal.
25	LOAD O	I	Magazine tray detection SW input.
26	INSID	I	Inner circle limit detection SW input.
27	BATT	I	Battery Low detection input terminal.
28	CLAMP	I	Disc clamp finish SW input.
29	UP	I	Elevator upper limit SW input.
30	N.C	–	No connection
31	LOW	I	Elevator lower limit SW input.
32	MAG.SW	I	Magazine detection SW input.
33	VRO	I	Reference voltage for TH1.
34	VRI	I	Reference voltage for TH2.
35	TH1	I	Temperature sensor ON input signl.
36	TH2	I	Temperature sensor OFF input signal.
37	ACC	I	Acc ON/OFF detection input.
38	D.ON	I	Disc detection Photo transistor input terminal.
39	VDD	–	Power supply terminal(+5V).
40	EJECT	I	Magazine Eject key input terminal.
41	DRF	I	Detect RF signal input terminal.
42	N.C	–	No connection
43	N.C	–	No connection
44	MODE	I	Initial setting input terminal for change 1 or 2 switching.
45	DISK C	I	Elevator Position detection pulse input.
46	6/10 CD	I	Initial setting input terminal for 6 discs chnger switching.
47	MUTE	0	Mute output terminal
48	FEM-	0	Pickup moving-inside output signal.
